Amendments In the Claims

Please amend Claims 1, 12, 15, 28, 45, 48 and 50 as follows:

- 1. (Currently Amended) A computer system comprising:
 - a processor:
 - a memory, coupled to the processor, and storing instructions executable on the processor, the instructions comprising
 - a forecast series creation set of instructions to
 - identify hierarchy data defining a hierarchy structure of an organization, including data identifying a hierarchical position of each member of the organization.
 - identify a date on which to generate a forecast and a period of time over which the forecast is to cover
 - identify members of the organization to be included in the forecast, the members derived from the hierarchy.
 - identify forecast data to be automatically analyzed to generate the forecast.
 - identify a visibility mode for the forecast.
 - generate a forecast series comprising the identity of the hierarchy data, the identity of the date and the period of time, the identity of the members of the organization to be included in the forecast, the identity of the forecast data to be automatically analyzed, and the identity of the visibility mode, and
 - store the forecast series, wherein the stored forecast series is

 accessible for use in generation of the forecast upon request
 for use in generation of the forecast;
 - an opportunity and revenue scheduling creation set of instructions to identify forecast data; and
 - a forecast creation set of instructions to generate the forecast using the forecast series.

(Previously Presented) The computer system of claim 1, wherein
the hierarchy structure comprises a plurality of management levels,
the forecast series creation set of instructions further comprises instructions to
define visibility rules that specify the forecast data that are visible to each
management level of the organization to be stored on the storage
device, and

include the visibility rules in the forecast series, and
the forecast creation set of instructions further comprises instructions to generate a
forecast for any management level of the organization, wherein
each forecast that is generated is based on forecast data that are visible to the
management level for which that forecast corresponds as specified by
the visibility rules.

- 3. (Previously Presented) The computer system of claim 2, wherein a forecast is generated for a manager, and the visibility rules include a maximum hierarchy depth search value n defining a search scope such that the forecast generated for the manager is generated from the manager's own forecast data and from forecast data corresponding to members of the organization who are defined to be both subordinate to the manager and occupy a management level in the hierarchy that is <= n levels below a management level occupied by the manager.</p>
- 4. (Cancelled)
- 5. (Previously Presented) The computer system of claim 1 wherein the opportunity and revenue scheduling creation set of instructions further comprises instructions to enable a member of the organization to submit a forecast to a superior; and prevent the member from modifying the forecast after it has been submitted.

 (Previously Presented) The computer system of claim 5, wherein the forecast creation set of instructions further comprises instructions to

present forecast data in a graphical format that enables a member to compare forecast data corresponding to related forecasts over time that are specified to be visible to that member.

7 - 11. (Cancelled)

12. (Currently Amended) A computer system comprising:

- a processor;
- a memory, coupled to the processor, and storing instructions executable on the processor, the instructions comprising
 - a forecast series creation set of instructions comprising instructions to identify hierarchy data defining members of an organization and a hierarchical position of each member,
 - determine an identity of a current forecast participant who is a member of the organization,
 - identify members of the organization who are subordinate to the current forecast participant based on the hierarchy data.
 - identify a date on which to generate a forecast and a period of time over which the forecast is to cover,
 - identify members of the organization to be included in the forecast, the members derived from the hierarchy,
 - identify forecast data to be automatically analyzed to generate the forecast,
 - identify a visibility mode for the forecast,
 - generate a forecast series comprising the identity of the hierarchy data,
 the identity of the current forecast participant, the identity of
 members of the organization who are subordinate to the current
 forecast participant, the identity of the date and the period of
 time, the identity of the members of the organization to be
 included in the forecast, the identity of the forecast data to be

automatically analyzed, and the identity of the visibility mode, and

store the forecast series, wherein the stored forecast series is accessible for use in generation of the forecast upon request for use in generation of the forecast:

- an opportunity and revenue scheduling creation set of instructions comprising instructions to identify forecast data corresponding to the members of the organization; and
- a forecast creation set of instructions comprising instructions to
 generate forecasts for one or more members of the organization who
 are identified as being subordinate to the current forecast
 participant, using the forecast series, and
 present forecast data to the current forecast participant.
- the current forecast participant is a manager whose forecast is determined, at least in part, on forecasts that are submitted by one or more selected members of the organization who are subordinate to the manager, and the forecast creation set of instructions further comprises instructions to automatically generate a forecast for any member among said one or more selected members who has yet to submit a forecast, and generate a forecast for the manager based on a combination of forecast submitted by said one or more selected members and any forecast that

(Previously Presented) The computer system of claim 12, wherein

13.

14. (Previously Presented) The computer system of claim 13 wherein the forecast creation set of instructions further comprises instructions to

is automatically generated.

automatically calculate forecasts for said one or more selected members of the organization who are subordinate to the manager and have not submitted their forecast in a recursive manner from lower levels to higher levels in the organization's hierarchy, wherein the manager occupies at least a second level of management in the organization's hierarchy.

15. (Currently Amended) A system comprising:

a processor;

a memory, coupled to the processor, and storing instructions executable on the processor, the instructions comprising

a forecast series creation set of instructions to

identify hierarchy data defining a hierarchy structure of an organization, including data identifying a hierarchical position of members of the organization,

identify rules that specify forecast data that are visible to each member of the organization,

identify a date on which to generate a forecast and a period of time over which the forecast is to cover,

identify members of the organization to be included in the forecast, the members derived from the hierarchy,

identify forecast data to be automatically analyzed to generate the forecast,

identify a visibility mode for the forecast,

generate a forecast series comprising the identity of the hierarchy data, the identity of the rules, the identity of the date and the period of time, the identity of the members of the organization to be included in the forecast, the identity of the forecast data to be automatically analyzed, and the identity of the visibility mode, and

store the forecast series, wherein the stored forecast series is

accessible for use in generation of the forecast upon request
for use in generation of the forecast:

an opportunity and revenue scheduling creation set of instructions to send data comprising a set of interactive HTML components via a computer network to a client, a portion of which enable forecast data

PATENT

corresponding to members of the organization to be entered via the client; and

a forecast creation set of instructions to

generate a forecast for members of the organization using the forecast series, wherein each forecast is generated based on forecast data that are visible to corresponding members according to the visibility rules, and

send forecast data corresponding to the forecast to the client to be viewed by a user through use of the set of interactive HTML components.

management level for which that forecast corresponds as specified by

the hierarchy structure comprises a plurality of management levels,
the forecast series creation set of instructions further comprises instructions to
define visibility rules that specify the forecast data that are visible to each
management level of the organization, and
include the visibility rules in the forecast series, and
the forecast creation set of instructions further comprises instructions to generate a
forecast for any management level of the organization, wherein
each forecast that is generated is based on forecast data that are visible to the

(Previously Presented) The computer system of claim 15, wherein

17. (Previously Presented) The system of claim 15, wherein

the visibility rules.

a forecast is generated for a manager, and

the visibility rules include a maximum hierarchy depth search value n defining a search scope such that the forecast generated for the manager is generated from the manager's own forecast data and from forecast data corresponding to members of the organization who are defined to be both subordinate to the manager and occupy a management level in the hierarchy that is <= n levels below a management level occupied by the manager.

18. (Cancelled)

16.

- 19. (Previously Presented) The system of claim 15, wherein the forecast creation set of instructions further comprises instructions to:
 - enable a member of the organization to submit a forecast to a superior; and prevent the member from modifying the forecast after it has been submitted.
- 20. (Previously Presented) The system of claim 19 wherein the forecast creation set of instructions further comprises instructions to enable one or more of the superior to which the forecast was submitted and a system administrator to unsubmit the forecast such that the member who submitted that forecast is enabled to modify the forecast.
- (Previously Presented) The system of claim 15, wherein the forecast creation set of instructions further comprises instructions to send data to the client, and
 - the set of interactive HTML components are configured to present the forecast data in a graphical format that enables a member to compare forecast data corresponding to related forecasts over time that are specified to be visible to that member

22 - 27. (Cancelled)

- 28. (Currently Amended) A system comprising:
 - a processor:
 - a memory, coupled to the processor, and storing instructions executable on the processor, the instructions comprising
 - a forecast series creation set of instructions to
 - identify hierarchy data defining members of an organization and a hierarchical position held by each member to be stored in a database,
 - determine an identity of a current forecast participant who is a member of the organization and using the client.
 - identify members of the organization who are subordinate to the current forecast participant based on the hierarchy data,

PATENT

- identify a date on which to generate a forecast and a period of time over which the forecast is to cover,
- identify members of the organization to be included in the forecast, the members derived from the hierarchy,
- identify forecast data to be automatically analyzed to generate the forecast.
- identify a visibility mode for the forecast,
- generate a forecast series comprising the identity of the current forecast participant, the identity of members of the organization who are subordinate to the current forecast participant, the identity of the date and the period of time, the identity of members of the organization to be included in the forecast, the identity of forecast data to be automatically analyzed, and the identity of the visibility mode, and
 - store the forecast series, wherein the stored forecast series is

 accessible for use in generation of the forecast upon request
 for use in generation of the forecast;
- an opportunity and revenue scheduling creation set of instructions to send data corresponding to a set of interactive HTML components via a computer network to a client that enable forecast data corresponding to members of the organization to be entered by a user of the client; and a forecast creation set of instructions to
 - generate forecasts, using the forecast series, for one or more members of the organization who are identified as being subordinate to the current forecast participant, and
 - send forecast data to the client to be displayed to the user via the set of interactive HTML components.
- 29. (Previously Presented) The system of claim 28, wherein the current forecast participant is a manager whose forecast is determined, at least in part, on forecasts that are submitted by one or more selected members of the organization who are subordinate to the manager, and

the forecast creation set of instructions further comprises instructions to
automatically generate a forecast for any member among said one or more
selected members who has yet to submit a forecast, and
generate a forecast for the manager based on a combination of forecasts
submitted by said one or more selected members and any forecast that
is automatically generated.

30. (Previously Presented) The system of claim 29, wherein the forecast creation set of instructions further comprises instructions to

automatically calculate forecasts for said one or more selected members of the organization who are subordinate to the manager and have not submitted their forecast in a recursive manner from lower levels to higher levels in the organization's hierarchy, wherein the manager occupies at least a second level of management in the organization's hierarchy.

31 - 44. (Cancelled)

45. (Currently Amended) A method comprising:

identifying hierarchy data defining a hierarchy structure of an organization, including data identifying a hierarchical position of each member of the organization;

identifying a date on which to generate a forecast and a period of time over which the forecast is to cover:

identifying members of the organization to be included in the forecast, the members derived from the hierarchy;

identifying forecast data to be automatically analyzed to generate the forecast; identifying a visibility mode for the forecast;

generating a forecast series comprising the identity of the hierarchy data, the identity of the date and the period of time, the identity of the members of the organization to be included in the forecast, the identity of the forecast data to be automatically analyzed, and the identity of the visibility mode;

storing the forecast series, wherein the stored forecast series is accessible for use in generation of the forecast upon request for use in generation of the forecast; and

generating the forecast using the forecast series.

46. (Previously Presented) The method of claim 45, wherein the hierarchy structure comprises a plurality of management levels and further comprising:

defining visibility rules that specify the forecast data that are visible to each management level of the organization to be stored on the storage device; including the visibility rules in the forecast series; and

generating a forecast for any management level of the organization using the forecast series, wherein each forecast that is generated is based on forecast data that are visible to the management level for which that forecast corresponds as specified by the visibility rules.

- 47. (Previously Presented) The method of claim 45, further comprising presenting the forecast in a graphical format that enables a member to compare forecast data corresponding to related forecasts over time that are specified to be visible to that member.
- 48. (Currently Amended) A machine-readable media on which a plurality of machine-executable instructions are stored that when executed by a machine generates forecast information corresponding to an organization by performing the operations of:

identifying hierarchy data defining a hierarchy structure of the organization, including data identifying a hierarchical position of each member of the organization;

identifying a date on which to generate a forecast and a period of time over which the forecast is to cover;

identifying members of the organization to be included in the forecast, the members derived from the hierarchy;

identifying forecast data to be automatically analyzed to generate the forecast; identifying a visibility mode for the forecast;

generating a forecast series comprising the identity of the hierarchy data, the identity of the date and the period of time, the identity of the members of the

PATENT

organization to be included in the forecast, the identity of the forecast data to be automatically analyzed, and the identity of the visibility mode:

storing the forecast series, wherein the stored forecast series is accessible for use in generation of the forecast upon request for use in generation of the forecast upon request for use in generation of the forecast; and

generating the forecast using the forecast series.

49. (Cancelled)

50. (Currently Amended) A method comprising:

identifying hierarchy data defining a hierarchy structure of an organization, wherein the hierarchy data comprises a hierarchical position of each member of the organization:

identifying a date on which to generate a forecast and a period of time over which the forecast is to cover:

identifying members of the organization to be included in the forecast, the members derived from the hierarchy;

identifying forecast data to be automatically analyzed to generate the forecast;

generating a forecast series comprising the identity of the hierarchy data, the identity of the date and the period of time, the identity of the members of the organization to be included in the forecast, and the identity of the forecast data to be automatically analyzed;

storing the forecast series, wherein the stored forecast series is accessible for use in generation of the forecast upon request for use in generation of the forecast; and

generating the forecast using the forecast series.
